

NORTHWEST VEGETABLE BEDFORMER

American Made for the Serious Farmer

Full Till with interchangeable Rear Bar Bedformer offers one-pass vegetable seedbed preparation with 1-12 rows on your centers and tops.

The Advantages of a Northwest Vegetable Bedformer:

- Thorough incorporation of green manure or crop residues, up to 14 3/4" in depth
- Maximum earth to seed contact for full germination
- Promotes free root movement, uniform emergence and stronger stands
- Increased yields
- Elimination of soil clods provides even water penetration
- One pass operation
- Adjustable bed widths and heights
- Easy to change row centers
- Easy conversion for cultivation of crops
- Exclusive belt drive system

ONETOUGHTILLER

Solutions for American farming.

The Northwest Full Till with Vegetable Bedformer can save you time and money by allowing you to prepare your fields for planting in only *One Pass*.

The Vegetable Bedformer gives you the advantage of full till operation in conjunction with bed preparation eliminating the need to loosen the soil in advance. The Northwest Vegetable Bedformer may be the only implement that you need for ground preparation. The full till action of this unit eliminates soil clods, resulting in even water penetration and maximum earth to seed contact for full germination.

Additionally, the Northwest unit will incorporate green manure or crop residues thoroughly, up to 14 3/4" in depth, producing a healthy micro biotope where beneficial micro

flora and fauna can thrive and where pathogens will find it difficult to become established! This healthier soil results in free root movement with better uptake, uniform

emergence, stronger stands and increased yields.

Our tillers give you the advantage of easy to change row centers and variable bed height. With adjustable bed widths, adjustable bedformers and adjustable rear aprons, a tiller/bedder becomes your most important implement.

Rugged durability is built into every Northwest Tiller.

Plan on a long life expectancy with a Northwest Vegetable Bedformer. Every unit is manufactured with American-made 1/4" to 1/2" steel throughout. But tiller toughness goes much deeper than the hide:

- Heavy-duty three point hitch
- Triple seal bearings protect critical moving parts.
- A heavy-duty gearbox incorporates a reliable gear and pinion system that just won't quit.
- A hardened 3-inch by 3-inch solid square shaft is built into every unit to handle rocks and other tough debris.
- Two-piece blade-mount rotor design.

Consider these options for increased adaptability to your conditions.

- Mesh, bar, plastic or hydraulic rollers
- Hard-faced, chisel or saber blades
- Plastic lining
- Gauge wheels; straight or swivel

The Belt Drive: Designed to protect your investment.

The Northwest Rotary Tiller is known throughout the world for its unique belt drive technology. Not only will our belt drive outlast clutch systems found in most implements today, it'll protect your tractor and PTO, as well. It safeguards your tractor investment and reduces crucial down times by absorbing the shock.

American made parts when you need them.

When it comes time for parts or service for your tiller, you can relax. Northwest Tillers has been in the business of building field-proven tillers for more than 40 years. Usually, tough tiller parts are readily available within a 24-hour period direct to your door.
